

GRAIN SAMPLER INSTALLATION INSTRUCTIONS

Installation of the grain sampler is done facing the back of the dryer. The grain sampler is mounted on the left side of the discharge auger tube and near the center of its length.

1. A 2" x 2" hole should be cut into the side of the discharge auger tube at approximately 45 degrees down from the left side of the tube (see figure).
2. Drill two 0.375" holes above and two 0.375" holes below this hole for the mounting bolts.
3. Use the truss head bolts included in the hardware package to mount the grain sampler. Mount the grain sampler with the boltheads on the inside of the auger tube for auger clearance.

NOTE: Mount the **GRAIN SAMPLER ASSEMBLY** so that the handle and slide gate must be pulled upward to open the chute.
