**Standard Bin Unload Tubes and Flights Change Notification**

As of January 1<sup>st</sup>, 2006, 12" was added to the length of 6", 8" and 10" standard bin unload tubes and flights at no additional charge. The change allows more room between the bin wall and angle ring to better accommodate the 8" and 10" rack and pinion.

New part numbers have been created for the individual parts and the bin unload kits to indicate the longer tubes and flights. The last digit of the catalog number has been changed to a "2" for all individual tubes and flights and 6" unload kits. For example, an 8" unload tube for a 36' bin is now "GT836002" and a 6" unload flight for a 24' bin is now "GF624002". The new number for a 6" horizontal unload kit in a 21' bin is now "GUH61212". The 8" and 10" unload kits now have a "2" inserted before the "R". For example, an 8" to 10" 25° unload kit for a 30' bin is now "GUI810302R" and a 10" horizontal unload kit for a 48' bin is now "GUH103482R". Below is a list of old part numbers with the corresponding new part number.

The new part numbers are available in the GSI Bin Quote program. Be sure to update your program regularly to receive the latest changes. The old part numbers will still be available for replacement. Please indicate on your orders if the tubes and flights are for field replacement or a new installation.
